		MILITARY COLORS				

* This comparison is made based on the color charts in screen format (RGB) that may differ from the real one

* **MINIM** colors are created to be as similar as possible to real colors. It is important to keep in mind that they are **NOT** ready to paint, for this you must dilute them with **10%** distilled water if you want to save the mixture.

* They are **EXTRA MATTE**, helping to create unique effects, washes, gradients, fades, etc. They require somewhat different application techniques than other acrylics.
